

Are communication conduits and fiber optic cable conduits the same

Overview

As we mentioned above, one of the key functions of communication conduit is to protect fiber optic cables—and the conduit specifically designed for this purpose, known as fiber conduit, is actually a subset of the broader communication conduit category. These cables may include: Fiber optic cables (for high-speed internet and data transmission) Ethernet cables (Cat5e, Cat6, Cat6A for LAN networks) Coaxial cables (for TV and CCTV). General Consideration: It is generally not recommended to run fiber optic cables in the same conduit as electrical power cables. This is due to several potential risks and complications that can arise from such an arrangement. Some maintain flawless operation for up to 3 years, while others suffer breakage within six months. This variation. The Inside Plant (ISP) telecommunications substructure are the cable pathways and support structures necessary for routing telecommunications cabling between telecommunications closets, and from the telecommunications closet to the work area.
