

Are iron towers considered communication base stations

Overview

It belongs to a type of macro base station, usually consisting of towering iron towers, dense antenna arrays, and supporting communication equipment rooms. Base station (or base radio station, BS) is – according to the International Telecommunication Union 's (ITU) Radio Regulations (RR) – a " land station in the land mobile service. " A base station is called node B in 3G, eNB in LTE (4G), and gNB in 5G. A Pico cell base station is a small wireless tower that provides improved phone and Internet services to local areas such as homes or small offices; More. Most people think that the towering iron tower is the entirety of the base station, but in fact, it is just the tower and antenna, just a component of the base station. These iron towers range in height from tens of meters to several tens of meters, with sturdy materials that can withstand natural attacks such.
