

Are utility poles for fiber optic cables or electrical cables

Overview

The most common communication cables found on utility poles are copper or fibre-optic cable (FOC) for telephone lines and coaxial cable for cable television (CATV). Coaxial or optical fibre cables linking computer networks are also increasingly found on poles in urban areas. A utility pole, commonly referred to as a transmission pole, telephone pole, telecommunication. Utility poles are an indispensable and important support for overhead power transmission line infrastructure such as long-distance communication and power transmission. In their served areas will be power generating stations, alternative energy sources (solar, wind, geotherman, etc.), substations for distribution and microgrids. As the discussion progresses, displaying the shape design, features/characteristics of the material, and method of application, the reader will have. Most utility cables have a very strong resemblance to each other because the majority of them have the same outer covering – black polyethylene. However, there are differences in their appearance, even with those that are black polyethylene.
