

Cable tray special protective pipe

Overview

PE pipes provide special mechanical protection for cables and wires used in all areas of civil engineering, both outdoors (above ground and underground) and indoors. They are also often laid as empty conduits for the later insertion of further cables. Preferred to support and protect numerous small instrumentation and control cables. Because of its closed design, this type of tray should be used in applications where there is minimal risk of heat generation and buildup. When equipped with a solid cover, this type of cable tray can be used as a one-piece. DKC is a European leader, and offers a comprehensive range of cable tray systems and energy protection, transport and distribution solutions for civil and industrial infrastructures. Our cable trays are produced in fit for purpose materials like stainless steel, galvanized, aluminium and fibreglass (FRP/GRP) composites to suit any project type both offshore and onshore. Eupen Pipe offers a wide range of PE pipes for.
