

Can a cable blowing machine be used for indoor optical cables

Overview

Standard optical fiber cables (like uni-tube, multi-tube, unarmored & armored), microduct cables, and micro-ducts can be installed by using this method. It is possible to install microduct cable using blowing method in continuous lengths of more than 1000 meters. Through the complementary strengths of ACOME, LYNDDAHL Telecom and Idea Optical, we now offer a comprehensive suite of cables, ducts and connectivity solutions for high-speed fibre networks across Europe. Our vertically- integrated plants and leading-edge industrial know-how guarantee complete. One of two methods in a fiber optic network installation is to lay the cable into place: blowing or pulling. Compressed air is injected in the duct inlet after few hundred meters of cable is pushed into the duct. Installing long. Fiber optic cable blowing, also known as fiber jetting, is the most efficient and cost-effective technique for installing fiber optic cables into pre-installed ducts. How it Works: Imagine a powerful air compressor feeding air into a specialized nozzle attached to a conduit.
