

Complete set of distribution box and transformer

Overview

Pre-assembled box type substation (hereinafter referred to as box transformer) is a factory Pre-assembled complete set of distribution equipment that combines high-voltage distribution equipment, transformers, and low-voltage distribution equipment according to a certain wiring. Pre-assembled box type substation (hereinafter referred to as box transformer) is a factory Pre-assembled complete set of distribution equipment that combines high-voltage distribution equipment, transformers, and low-voltage distribution equipment according to a certain wiring. substations with installed power limited to 2000 kVA or two 1000 kVA MV/LV transformers., with a voltage of mostly 15kV. It is enclosed in a corrosion-resistant metal box with transformers and low-voltage units, and supports two wiring modes on the high-voltage. Box-type substation is a kind of high-voltage switchgear, distribution transformer and low-voltage distribution device. into a compact complete distribution device for receiving and distributing electrical energy in the. The distribution box (DB box) helps safely and efficiently distribute electrical power. Today, electrical systems are essential for homes and industries.
