

Distribution box yellow-green wire ground wire

Overview

When connecting the ground wire, a yellow-green insulated copper core soft wire with a cross-sectional area not less than the specified value should be used. The various colored wires that you can see when you look behind a switch or an outlet are not an accident, but rather a safety feature that is built in. Wiring color codes are similar to a universal language because they tell you what each wire accomplishes, and they help you avoid risky mistakes. This article provides a comprehensive overview of the role, applications. Power from factory ground must be installed by a qualified electrician. Each DISTRIBUTION BOX and controller must be grounded. Grounding of the units: Attach a ground wire from one of. Why have yellow/green color become the internationally recognized grounding wire identifier?

The International Electrotechnical Commission (IEC), the world's most authoritative electrical standards organization, specifies that safety grounding conductors must use alternating green and yellow. Electrical wire color codes are standardized systems of color markings used on electrical wiring to indicate the purposes and voltages of specific wires within an installation.
