

# Distribution network automation DTU power supply

## Overview

DTU distribution automation terminal for smart grid control, remote monitoring and feeder automation. Reliable solution for modern power distribution networks. The main function of the DTU module is to conduct real-time monitoring, fault detection, remote control and communication management of. CSP6000 series power distribution automation station terminal (hereinafter referred to as station terminal) is a new generation of microcomputer-type power distribution automation station terminal integrating telemetry, telecommunication, remote control, protection and communication based on. DTU is a terminal device of a switching station, generally installed in conventional switching station, outdoor small switching station, ring network cabinet, small substation, box-type substation, etc. The basic contents include voltage, current, frequency, power and power factor, and up to 6 groups of modules can be configured.
