

Do computer rooms without a dedicated server room require a power distribution box

Overview

To minimize possible differences in potential in the grounding systems for power circuits supplying IT equipment, it's common for these centers to be equipped with single or multiple power distribution units (PDUs). This term is not defined in the NEC, but is described in 645. All installed communications and IT equipment must be listed. The room must be separated from other occupancies in. A server room is a dedicated space designed to house computer servers, networking devices, and related hardware that manage data and applications. Not only will you get peace of mind when power outages occur, UPSs also provide protection against power fluctuations and surges. Even DC powered devices may have their own AC/DC adaptor plugs that will need to be connected to a critical power protected source. What type of sockets do you need?
