

Do fiber optic patch cords have female connectors

Overview

The male connector has two PIN pins, while the female connector does not. In MPO and MTP fiber connector systems, Male vs Female and Pin vs No-Pin describe the same core engineering attribute: the presence or absence of alignment pins on the MT ferrule. Unlike single-fiber connectors such as LC or SC, this distinction is not optional terminology but a mandatory. A fiber optic patch cord (fiber jumper) is: Typical applications: A patch cord is the “bridge” that connects two fiber devices and lets them talk to each other. Today we are going to talk about the difference between male and female MPO patch cords. Unlike backbone trunk cables—which are typically multi-fiber. Fiber patch cables, also called fiber-optic patch cords, are cables typically containing one or two optical fibers, which are equipped with standardized fiber connectors on both ends.
