

Drop Cable Cabling Solution

Overview

Drop cable are engineered for flexibility and ease of installation, featuring a slim profile with 1-4 optical fiber (occasionally up to 12 for specialized needs). Their lightweight design facilitates seamless routing through tight spaces, making them ideal for both indoor and. In any FTTH (Fiber to the Home) network, the drop cable is the final and most critical part of the optical access network. It connects the outdoor distribution point to the customer premises and directly affects installation speed, service quality, and long-term reliability. Each factory-connectorized cable is designed to eliminate time-consuming field splices. Our plug-and-play architecture speeds connections and service turn-up throughout the network. These cable bridge the gap between an ISP's backbone infrastructure and end-user premises, enabling high-speed internet, voice, and data service in residential. Drop cables and building entry cables from SENTAL are specially designed to bring fiber optic networks reliably and efficiently directly into buildings.
