

Fiber optic cable junction boxes should have an outer casing

Overview

Housing: The outer casing of an FTB is its first line of defense. Constructed from sturdy, impact-resistant materials, the housing is engineered to shield the delicate internal components from physical damage during installation and operation. A fiber optic junction box, also known as a fiber optic distribution box or termination box, is a protective enclosure that facilitates the connection and management of fiber optic cables. **INSTALLATION OF NEW ANCHOR LOCATIONS SHALL BE SPECIFIED ON CONSTRUCTION PRINTS OR APPROVED BY NOANET 3. DO NOT ATTACH GUYING TO EXISTING COMMUNICATION ANCHORS.** **Size and Dimensions:** The box should have sufficient space to accommodate the. **Minimize mechanical pressure on the outer sheath at crossing points:** (armoured) cables crossing each other generate points of high pressure, so it is important when laying in figure 8 loops it is done in a correct way.
