

Fiber optic cable splicing with figure-eight twisting

Overview

When laying loops of fiber on a surface during a pull, use “figure-8” loops to prevent twisting the cable. The figure 8 puts a half twist in on one side of the 8 and takes it out on the other, preventing twists. Use this procedure for pulling from one end: 1. The size of the „8“ will be determined by the size and stiffness of the cable, but 2 to. Corning Optical Communications self-supporting (figure-8) optical fiber cable greatly simplifies the task of placing fiber optic cable on an aerial plant. The. Figure 8'ing Fiber Optic Cable - Step-by-Step In this video, fiber optic technician Rick Larson walks you through the step-by-step process. Another method of connecting optical fibers is termination or connectorization, which consists of processing the end of a fiber optic bundle so that it can be connected to other fibers or devices through fiber optic. Figure-8 fiber optic cable installation refers to a specific method of aerial installation for fiber optic cables.
