

Five switches interconnected via fiber optic cables

Overview

This is the most fundamental ring topology, formed by connecting three or more switches in a closed loop using fiber optic cables. Each node is connected to two other nodes, forming a ring-like structure. This design ensures data can travel in both directions. (attached is the image here with) I see that the 2960 has 2 SFP ports each port of each switch. I am planning to connect core switch to multiple switches using 6 strand fiber cable. which type of cnnnection is resilient Star or Ring?

?

?

If I make star then do i have to use new cable to each switch or strand of a cable to patch other switch?

?

Thanks. It usually depends on the model of the switches. Understanding Fibre Optic Cables & Types with Network Switches & Patch Panels — Top Rated 2026 | Buy Now! In this video, we'll delve into the world of fiber optics, exploring the reasons behind their necessity, introducing Fiber Switches and Fiber PoE Switches, guiding you through the selection of. Traditionally, network switches have been connected using copper cables, but with the increasing demand for high-speed and reliable connectivity, fiber optic cables have gained prominence.
