

Gabon OPGW Optical Cable

Overview

Several different styles of OPGW are made. In one type, between 8 and 48 glass optical fibers are placed in a plastic tube. The tube is inserted into a stainless steel, aluminum, or aluminum-coated steel tube, with some slack length of fiber allowed to prevent strain on the glass fibers. The buffer tubes are filled with grease to protect the fiber unit from water and to protect the steel tube from corrosion. An optical ground wire (also known as an OPGW or, in the IEEE standard, an optical fiber composite) is a type of cable that is used in power lines. Such cable combines the functions of a ground wire and an optical fiber. An OPGW cable was patented by BICC in 1977 and installation of optical ground wires became widespread starting in the 1980s. In the peak year of 2000, around 60,000 km of OPGW was installed worldwide. Asia, especially China, has the largest installed base. Optical fibers are used by utilities as an alternative to private point-to-point microwave systems, or as communication circuits on metallic cables. OPGW as a communication medium has some advantages.
