

H3C multimode optical module does not emit light

Overview

The optical module is faulty. · The current version of the device does not support the transceiver module. · The transceiver module. Optical modules are commonly used in switches, network cards, routers and other communications equipment, in the process of using the optical module information can be read to understand its real-time operating status, when there is a link abnormality can be more quickly locate the cause of the. The following uses the Moduletek QSFP-40G-LR4 module connected to an H3C S6820 switch as an example to introduce how to read information of the connected optical module on an H3C switch. Check Optical Module Status Run the. This document is not restricted to specific software or hardware versions. General guidelines IMPORTANT: To prevent an issue from causing loss of configuration, save the configuration each time you finish configuring a feature.
