

How often should a 10kV busbar be tested

Overview

Q1:How often should I perform a busbar torque check on my high voltage cabinet?

A1:It is highly recommended to perform a comprehensive check at least once a year. Ultrasonic testing is good at detecting cracks on the surface (or) within the busbar's material. Inspect the busbars protective coatings for evidence of wear or damage. Protective coatings serve to prevent corrosion and extend the life. How Often Should Busbar Inspections Be Performed?

The frequency depends on the operating environment and load demands: Industrial facilities – At least annually, or more often in high-demand applications. Commercial buildings – Every 1-2 years, depending on load and environmental conditions. Here at MET Group Technical Services, on top of regular testing methods, we. Regular inspections prevent catastrophic failures by catching early signs of cracks, corrosion, or material degradation in busbar insulators.
