

How to connect the jumper wires of the terminal box and switch

Overview

Using one jumper wire, attach the three ring terminals to the centre post on the left side of each switch (note that this may be post #2 or #5). This provides a convenient way to expand the number of wires attached to a single node. This is particularly useful for power distribution in low current applications. Remove the screws from post #2 and post #5 on each of the three switches. What is a Combo Switch/Outlet Device?
