

How to soundproof the elevator electrical distribution box

Overview

This type of problem can be easily solved by simply applying a layer of mass loaded vinyl to the walls in question. Mass loaded vinyl is usually about 1/4" thick and weighs about 2 lbs per square foot. This type of mass, when added to the walls, makes it more difficult for sound to. The best option for how to block noise from an elevator is either to add mass to the adjoining wall or to decouple it. Elevator noise can be a real bother. It comes from many parts of the lift and can make rides less comfy. Guide shoes rub. Elevator systems generate airborne and structure-borne noise, and meeting building standards such as DIN 4109 and VDI 2566 requires careful acoustic planning to ensure protected rooms remain at or below 30 dB (A) after reverberation time corrections. Low frequency emissions, especially 80 to 200 Hz. Melamine foam is an innovative and effective solution to these issues due to its sound absorption, vibration damping, and thermal insulation properties.
