

Installation of a four-port fiber optic terminal box

Overview

This guide walks through a practical, real-world installation process used in FTTH deployments. Covers mounting, splicing, routing, labeling, and testing for indoor/outdoor use. Installing a fiber optic termination box is one of those jobs that looks simple on paper, but it's easy to do poorly in the field. Proper installation and maintenance of FTBs are essential to ensure the reliability and performance of the network infrastructure. It functions as a junction between the incoming fiber cable and the outgoing customer-side fiber cable, where one fiber can be spliced, patched. The installation of the fiber optic indoor terminal box (FTTH terminal box) requires certain professional skills. If you do not have relevant experience and skills, it is recommended to ask a professional to install it. They also feature resistance to moisture, impact, chemical exposure.
