

Is a 16G optical module compatible with an 8G one

Overview

SULITON 16GFC SFP ER Module is an enhanced SFP+ fiber optic transceiver with dual LC connector supporting transmission at 14.025 Gb/s up to 40 kilometers of single mode fiber. In the past, Fibre Channel was mostly used for supercomputers, but now it is also becoming a common connection. GIGALIGHT 8GFC/16GFC SFP+ optical transceiver module complies with 8G/16G Fiber Channel specifications and is compatible with 2G/4G Fiber Channel transmission protocols, and is suitable for storage area networks in data centers. The product line includes multi-mode series and single-mode series. Modern Fibre Channel optics are available in multiple speed generations, including 8G FC, 16G FC, 32G FC, and 64G FC, with both multimode and single-mode options. The transceiver operates on 1 wavelength and works in point-to-point scenario. They are compliant with. The 8G FC SWL SFP+ module supports a variable link length dependent on the baud rate and installed multimode fiber (MMF).
