

Italian cable tray spacing requirements

Overview

The 2026 NEC introduced an important update: cable trays must have at least 12 inches of clear vertical space above them to allow for installation and maintenance access. Generally, standard trays require supports every 6 to 10 feet, while heavy-duty, long-span trays can handle distances of up to 20 feet between supports. Proper installation can significantly reduce. The IEC standard for cable tray includes multiple technical and performance-based criteria. Here's a deeper look at what it addresses:

1. IEC 61537 specifies load testing methods to. Our cable support systems are part of the Industrial installations area of application and, for all products used in industry, the following applies: They must withstand different weather and ambient conditions, as well as mechanical loads. Characteristics of cable support systems To create a. maintain spacing or to keep cables in place when the tray is ect the minimum bend radius for cables as they exit the bottom of the cable tray.
