

Jamaica Silicon Photonics Technology

QSFP28

Overview

100 Gb/s DR1 QSFP28 Optical Transceiver is a small form-factor, high speed, and low-power consumption product targeted use in optical interconnects for data communications applications. The high-bandwidth QSFP28 module supports 500 m links over single-mode fiber via LC connector. Meanwhile, silicon photonics technology — a disruptive innovation — has steadily gained traction through years of R&D. For 100G QSFP28 transceivers, silicon photonics offers several key benefits:

Higher Integration: By combining multiple optical functions on a single chip, silicon photonics reduces the size and complexity of transceivers. Stresses beyond. e most characteristic parameters. Please refer to the respective datasheet min Tx power and Rx sensitivity. Dispersion/path penalties not taken into account. FEC: If FEC is required in host equipment for performance @ 1 GHz grid and with integrated FEC. It is compliant with the QSFP28 MSA, 802.3cu 100GBASE FR1 and CAUI-4(no FEC)1. It integrates 4 data lanes in each direction with.
