

KVM switcher does not support Linux

Overview

For the Ubuntu system, all packages required to run KVM are available on official upstream repositories. Install them using the commands: Load and enable the module `host-net`. Run the following commands to install KVM hypervisor on these systems. Start and enable the service. We'll install KVM and QEMU plus some tools like `libguestfs-tools` and `virt-top` which comes in handy when administering KVM. Install them as below: Confirm that the kernel modules are loaded: Start and enable `libvirtd` service: For Arch Linux and its derivatives, I already wrote an article which is available on the link below. 1. Install KVM, QEMU and Virt Manager on Arch Linux and Manjaro The CPU on the system you're using should have Intel VT or AMD-V function. The install required packages using: Ensure the kernel module required to virtualize is on: Start and enable `kvm` service:.
