

Large Network Aggregation Switch

Overview

An aggregate switch is a high-capacity network switch that consolidates connections from multiple access switches, acting as a central point for managing network traffic and providing enhanced bandwidth capabilities. It is essential for larger networks requiring efficient data flow. The GWN7830 Series of Layer 3 Aggregation Network Switches offers 3 model options, with up to 24 SFP ports and 12 SFP+ ports, which are ideal for medium-to-large businesses and enterprises that require high-performance networks with maximum capacity and control. By bundling multiple network connections into a single high-bandwidth link, aggregation switches help. Equipped with all-fiber ports, Omada Aggregation Switches deliver up to 10 Gbps. With advanced features such as Static Routing, DHCP Server, ACL, IGMP Snooping, STP, LAG, and centralized cloud management, they offer a robust and reliable solution for the aggregation layer of SMB networks. As your LANCOM aggregation switches enable high-performance and hierarchical switch infrastructures to be set up and serve as the distribution basis for networking subordinate access switches.
