

Laying optical cables in vertical shafts

Overview

Cable trays or raceways often provide a convenient, safe and efficient method of fiber optic cable installation. Trays can be installed in ceilings, below floors and in riser shafts. When installing fiber optic cables in trays, National Electric Code (NEC) standards may. The application discloses a cable laying method for a large-depth shaft, belongs to the technical field of cable construction, and solves the problem that cables with large cross-sectional areas are inconvenient to bend when entering and exiting a deep well in the laying process in the prior art. They needed conduit pipes that would withstand the tensile forces of the pipe weight. For this reason experimental tests have been performed on. Minimize mechanical pressure on the outer sheath at crossing points: (armoured) cables crossing each other generate points of high pressure, so it is important when laying in figure 8 loops it is done in a correct way. When laying loops of fiber on a surface during a pull, use “figure-8” loops to.
