

# Manufacturing of Optical Amplifiers

## Overview

Explore 19 top manufacturers and suppliers of Optical Amplifiers in our comprehensive photonics buyers' guide. Designs and manufactures optoelectronic components and subassemblies for satellite communications, sensing, telecommunications, datacom, wireless, lidar, and. This section provides an overview for optical amplifiers as well as their applications and principles. Our semiconductor optical amplifiers (BOAs or SOAs) are available as benchtop systems, as well as high-speed amplifier instruments with built-in. An optical amplifier is a device that receives an input optical signal and generates an output signal with higher optical power through stimulated emission or nonlinear optical processes. Unlike electronic repeaters, they do not convert the light to electricity and back. This allows to transfer light signals over long distances in communication systems without any degradation in quality.
