

No signal output after KVM switch is switched

Overview

Solution: First, check if the input source is powered on, and ensure that you have switched to the corresponding channel where the input source is connected. Problem 3: The KVM switch is on but nothing shows on the display or it shows “no signal”. You'll also learn when it might be time to upgrade to a more reliable, feature-packed KVM switch like Avico's. Both the acer and MSI monitors are. Everything worked great for several weeks, then one day the desktop PC started losing video after I'd switched the KVM to the Beelink and back again. It occasionally works, maybe once, but usually fails. I also do not get any display output when I then plug my monitor directly to the GPU. To “fix” the issue I have to. I want to be able to easily switch between my home Windows desktop and Windows work laptop, using the same mouse (optionally some other USB devices), keyboard, and two monitors (in extended settings), while also powering my laptop.
