

ODF frame fiber optic fixing

Overview

Optical Distribution Frames (ODFs) are used for terminating fiber optic cables. Available in different types and designs depending on the number of fibers to be installed and requirements on design and safety. It provides fiber fixing, splicing, termination, patching, and cable management in telecom rooms, data centers. Enter the Optical Distribution Frame (ODF)—a foundational component that serves as the “nerve center” for fiber optic management, enabling seamless connectivity, efficient maintenance, and scalable growth. Unlike standard racks and fiber optic panels, they are modular and agile, specifically designed for today's fast. Bottom installation: Select a proper installation position in the equipment room and drill four holes in the floor according to the dimensions shown in the manual. Fix the rack to the ground with expansion bolts.
