

Optical Switch ONU

Overview

The optical network unit links your fiber cable to your devices. Your computer or TV can use these electrical signals. An ONU is a terminal device in a fiber-to-the-home (FTTH) network. The ONU is responsible for: ONUs operate at Layer 1 and Layer 2 (physical and. ONU stands for Optical Network Unit. In simple terms, it's a device that receives the optical signal from your Internet Service Provider (ISP) via a fiber optic cable and converts it into electrical signals that your router, computer, phone, and other devices can understand and use. Essentially, the OLT is the brains of the FTTH network, controlling how. This article provides a deep-dive analysis of ONU technology, including its history, role in PON ecosystems, working principles, components, standards, management, deployment, troubleshooting, and future evolution toward next-generation fiber access.
