

Outdoor Stainless Steel Cable Tray Selection

Overview

For most general outdoor applications, Hot-Dip Galvanized Steel in a Ladder-Type configuration is the default and often correct choice. It provides the best balance of strength, corrosion resistance, and cost. Avoid where it could contact dissimilar metals. HDG's zinc coating protects the underlying steel. Cable tray (or cable ladder) systems are a popular alternative to electrical conduit systems, as they have an outstanding record for dependable service, design flexibility and cost savings in commercial and industrial applications. All illustrations, descriptions and technical information included in this document are provided as indications and can cable trays are equivalent. These essential infrastructure components provide structured pathways for power, control, and communication cables while ensuring safe and efficient operation. Ladder cable trays consist of two longitudinal side members connected by individual transverse members and provide solid side rail protection and system strength with smooth radius fittings and a wide selection of materials and finishes. Materials available: Aluminum, Steel, Steel HDGAF, Stainless.
