

Photovoltaic undervoltage trip module

Overview

An undervoltage trip release (UVR) is a protective device built into circuit breakers that automatically trips the breaker when the supply voltage drops below a safe operating level. Unlike the. This is the digital module "ANSI 27/59 - Under/Over voltage" for Micrologic X trip unit on MasterPact MTZ offer. Digital modules allow you to customize MasterPact MTZ. Undervoltage is an electrical system disturbance that will affect the performance of connected electrical equipment and reduce the life of the equipment, including battery components in DC voltage source electrical systems such as solar power plants. The undervoltage release "resets" when the monitored voltage is re-established allowing the circuit breaker to reclose (the sealing voltage of the UVR. The Eaton Moeller U-PKZ0 is a compact and reliable undervoltage trip module designed for motor safety switches. Rated at 400V AC, it supports 18"14 AWG terminal wiring and operates in industrial temperature ranges. This product is already in your quote request list.
