

PoE switch connected to NAS

Overview

Use a managed PoE switch (such as a Synology or Netgear model) to connect your cameras. This switch powers the cameras and connects them to the same local network as your NAS, ensuring low latency and stable performance. The TP-Link TL-SG1005P is a powerful and versatile 5-port Gigabit PoE switch that's perfect for home and small office networks. MOST of my traffic is 24/7 recording from the cameras on my NAS. I tried following this thread below but it's missing information to configure the LAN 2 port for DHCP. The thread is a bit old because the current software for the 918 is asking for the following information. I want to connect a poe reolink camera (Duo 2) through a poe switches (GS108PP) into a syntology nas system (DS920+). Or does the switch automatically recognize that the nas has no need for. I was thinking, can I connect my POE switch to the Synology DiskStation via one of the ethernet ports and then the Synology to the router?

The reason why I'm suggesting this setup instead of connecting the POE switch to the router and then the Synology server to the router, is because I don't want.
