

Pure copper connector optical module

Overview

The Copper SFP module, also known as the fiber port convert copper port module, is a hot-pluggable module designed in SFP format. It features an RJ45 connector type and is capable of supporting hot plugging. Samtec's FireFly™ Micro Flyover System™ embedded and rugged mid-board optical transceivers take data connection "off board" for up to 28 Gbps per lane with a path to 112 Gbps PAM4 via optical cable at greater distances, or copper for cost optimization. Notably, the transmission distance of the copper module typically ranges from 10 to 30. Our 10/100/1000BASE-T Copper SFP transceiver delivers versatile tri-speed Ethernet connectivity over existing Cat5/Cat6 cabling. Supporting auto-negotiation from 10 Mbps to 1 Gbps over distances up to 100m, this module provides flexible data rate selection with standard RJ45 interface. Unlike traditional optical transceivers that use fiber optics, Copper SFPs leverage electrical signals, making them ideal for.
