

Silicone Coating for Optical Couplers

Overview

Transparent silicone compound, grease-like material for optical coupling. Two-part, 1:1 mix ratio, dark gray, room temperature or heat-accelerated cure encapsulant intended for use in potting printed circuit board (PCB) system assemblies. DOWSIL™ EE-3200. Optical Bonding offers many advantages over air gap bonding and most other bonding materials for display manufacturing. Highly flexible, impact-resistant, non-shattering. Momentive Performance Materials (MPM) maintains an around-the-clock emergency service for its products. Optical coating materials containing silicon and other metal. This non-curing and water insoluble silicone optical coupling and splicing gel is used to eliminate losses in fibre optic cable splicing. It minimizes loss by reducing the difference in the index of refraction between the mated fibre ends and thereby increases the transmittance of light.
