Tanzania 400G Optical Module Energy Saving Type

Overview

It is a hot-pluggable QSFP-DD module with a 4-channel full-duplex integrated design and a data rate of up to 425Gbps, meeting the IEEE 802. It uses an MPO-12/APC interface and operates at a wavelength of 1310nm. It has a maximum power consumption of. In 2025, hyperscale data centers are rapidly adopting 400G optical transceivers. Unlike previous waves primarily focused on cost savings, today's adoption emphasizes power efficiency, thermal management, and long-term operational sustainability. AI workloads and high-performance cloud services. From cloud data centers to metro and long-haul networks, 400G—particularly coherent variants like ZR and ZR+—is helping eliminate bandwidth bottlenecks and support the growing demands of AI, big data, and next-generation digital services. At the OFC exhibition in 2023, there was a proliferation of 800G optical module products, indicating further industry attention to 800G products. It is expected that the volume. What are the benefits of moving to 400G technology?

Arista's 400G platforms allow data centers and high-performance computing environments to address growing needs for higher bandwidth at lower cost and power per gigabit. The most common 400G form factor is QSFP-DD (Quad Small Form-Factor.
