

Temperature measurement of copper busbar of high voltage switchgear

Overview

Non-contact infrared temperature sensors are ideal: they can provide an accurate, instant reading of the surface temperature of the conductor, while remaining physically isolated from the voltage it carries. Temperature monitoring in high-voltage busbar systems is vital for preventing faults, yet difficult due to electrical hazards, limited accessibility in switchgear cabinets, and interference risks in traditional contact-based methods. Statistical analysis from electrical utilities worldwide reveals that thermal-related failures account for 30-40% of all high voltage switchgear breakdowns, with average repair costs. Temperature rise testing is one of the recommendations of IEC 61439; our system for monitoring switchgear and busbars is easily integrated with new installations or retrofitted to existing infrastructure. Simulation results allow a set of analyzes, such as the. Busbar (copper row) lap surface is the “throat” part of the power transmission and distribution system, and its contact state directly determines the efficiency and safety of power transmission. Due to busbars conducting high currents, small rises in temperature can be indicative of faults.

Switchgear and Busbar Temperature Monitoring

The AP Sensing Linear Heat Detection (LHD) solution consists of a fiber optic sensor cable fitted within the switchgear or attached to the busbar, plus a DTS control instrument that

Nov 29, 2025

Thermal Model for Copper Busbar and Electrical Connections for ...

This paper presents the mathematical modeling that provides the internal heating of a controlgear's busbars and electrical connections. The obtained results are compared to the temperature rise (T)

Feb 08, 2026

Busbar Temperature Monitoring in Switchgear Cabinets

The sensor is positioned at a safe distance from the busbar to avoid the risk of an electric arc, and will measure the surface temperature within a small spot. The size of the measured spot depends on the

Nov 10, 2025

Temperature Monitoring in High-Voltage Electrical Systems

The sensor is positioned safely from the busbar to avoid the risk of an electric arc and measures the surface temperature within a small spot. The measured spot size depends on the chosen optics and
