

The cable tray is galvanized

Overview

A galvanized cable tray is a metal pathway system used to support, protect, and route electrical cables within a building or facility. The mechanical and electrical characteristics, tests, certifications, overall quality management, recommendations mentioned in this technical guide only apply to our own cable management ranges and cannot under any circumstances be transposed to si osure, overheating or. Common cable trays are made of galvanized steel, stainless steel, aluminum, or glass-fiber reinforced plastic. The material for a given application is chosen based on where it will be used. Galvanized tray may be made of pre-galvanized steel sheet fabricated into tray, or may be hot-dip. The primary distinction lies in the area of use of the metal. Dry indoor rooms should use pre-galvanized (PG) steel. The wrong one is the most common error. Atkore Trof is a prefabricated mill-galvanized steel structure consisting of ventilated or solid bottoms, welded to the side rails, and is manufactured and tested to NEMA Standard VE-1 Zero Tangent Fittings Tangent eliminate the wasted space in tightly packed areas, allowing more tray runs to.
