

Topographic map of optical fiber cables

Overview

Explore our fibre-optic grid with our interactive map: Zoom into the map in seven steps (zoom levels) to view the route in detail or search directly for your location using the search function. Filter by city connections, districts and fibre-optic routes. Did we pique. This visualization shows the growth of the undersea cable network, global internet peering capacity, and the distribution of IP addresses via BGP announcements over time. Use the controls at the top to play the animation or step through year by year. For more details and insights, please read this. Ask about ICT infrastructure, broadband data, or interact with the map. Cables shown on include international submarine cables with a maximum. Submarine and terrestrial fiber optic cables form the backbone of modern global communication, carrying data across continents at incredible speeds. It is the community's best and freely accessible tool that allows engineers, carriers, data center operators, business development executives and other stakeholders to navigate the Internet's.
