

What are the uses of Huawei gigabit optical modules

Overview

The StarryLink optical module series is designed to deliver a premium "3S" network experience—Spanning (ultra-long-distance transmission), Stable (exceptional reliability), and Secure (enhanced security)—to accelerate enterprise digital and intelligent transformation. Why Do We Need StarryLink. The eSFP-GE-SX-MM850 optical module is a Huawei Gigabit multimode optical module with DOM/DDM support, which is packaged in an SFP package with a center wavelength of 850 nm. When used with multimode optical fiber (LC/PC-LC/PC OM2), the transmission distance can reach up to 550 m, the transmission. A GPON optical module is connected to one SC optical fiber to provide the Gigabit-capable passive optical network (GPON) access service. Together, they ensure resilient data center interconnectivity and empower. On an optical network, a sender needs to convert electrical signals into optical signals before sending them to a receiver, and the receiver needs to convert received optical signals into electrical signals. An optical module is a component that completes electrical/optical conversion on an optical.
