

# What is the appropriate width for anti-corrosion cable trays

## Overview

Narrow trays between 100-150 millimeters are commonly used for instrumentation and control wiring in process industries, where cable counts remain modest and space constraints exist. Ladder cable tray is available in widths of 6, 9, 12, 18, 24, 30, 36, 42 and 48 inches with rung spacings of 6, 9, 12 or 18 inches. Note that wider rung spacings and wider cable tray widths decrease the overall strength of the cable tray. Specifiers should be aware that some cable tray. cable trays are equivalent. The mechanical and electrical characteristics, tests, certifications, overall quality management, recommendations mentioned in this technical guide only apply to our own cable management ranges and cannot under any circumstances be transposed to si osure, overheating or. maintain spacing or to keep cables in place when the tray is ect the minimum bend ra-dius for cables as they exit the bottom of the cable tray. Choosing the right anti-corrosive cable trays is essential for preventing damage and maintaining. This guide provides detailed insights into preventing corrosion and extending the lifespan of cable trays.
