

What material is the end face of the MPO connector made of

Overview

In an MPO assembly, the fibers MUST protrude from the polymer ferrule end-face: the MT ferrule surface is one plane, and the fibers must protrude beyond that surface. The extent of this protrusion, or the fiber height, typically ranges from 1. Originally introduced for use with multi-fiber ribbon cable, MPO connectors feature a linear array of fibers in a single ferrule. The connector's general design also has unique features from conventional connectors such as being rectangular in shape. An MT ferrule is a rectangular polymer (plastic) block with holes for multiple fibers, where. While the information has been carefully compiled to the best of our knowledge, nothing is For the installation of the intended as representation or warranty on our part and no statement herein shall be construed electrotechnical equipment, as recommendation to infringe existing patents.
