

Which module is used for high and low beams in the 5-series

Overview

In many BMW models, this module is referred to as the FRM (Footwell Module), which not only controls lighting but also manages some functions in the driver's footwell area. In sealed-beam headlamps, which have been part of the automotive landscape for decades, the filament (s), reflector, housing and lens are incorporated into a single assembly. High beams off/headlight flasher, arrow 2. General information Do not use the wipers if the windshield is dry, as this may damage the wiper blades or cause them to become worn more quickly. Have. Chances are, the lighting control module (LCM)—also known as the footwell module (FRM) in BMW models—is the root cause. As a critical electronic control unit (ECU) in modern vehicles, the LCM manages all lighting systems, and diagnosing its issues requires reliable tools. In this guide, we'll. I recently bought two new equal aftermarket LED headlight modules (63115A0AFC0) for BMW g30 LCI. I did code them with the same version CAFD. The problem. When the high beams are switched-on, starting with a speed of approx.
