

Which sub-division does the cable tray belong to

Overview

In industrial settings, electrical and instrumentation (E&I) cable trays or bridge racks play a critical role in organizing and supporting power, control, and signal cables across facilities. Cable types MI, MC, PLTC, or TC were permitted in ventilated channel tray in a single layer with a space not less than the larger cable diameter between two adjacent cables. In the 1993 NEC there were changes to this section. Today, electrical cable trays have become an essential component in industrial and commercial construction, providing a quick, economical, and. According to the National Electrical Code standard of the United States, a cable tray is a unit or assembly of units or sections and associated fittings forming a rigid structural system used to securely fasten or support cables and raceways. An effective layout ensures safety, minimizes interference, reduces maintenance time, and keeps the overall.
