

Will liquid cooling be the next optical module

Overview

Liquid cooling technology, leveraging its higher thermal conductivity efficiency and energy-saving advantages, has been introduced into the optical module field, becoming a key direction for addressing the bottleneck of high-power heat dissipation. OSFP optical modules, in particular, now require liquid cooling to sustain higher bandwidth, reliability, and serviceability. This industry transition has been strongly accelerated by the launch of XPO, which introduces liquid-cooled architectures for next-generation optical modules and sets a new. While the industry-standard OSFP (Octal Small Form-Factor Pluggable) module has successfully enabled 400Gbps, 800Gbps, and 1. As a result, critical emphasis has been placed on increasing. Traditional air-cooling solutions can no longer meet the thermal demands of high-performance chips such as GPUs, ASICs, and optical chips. According to IDC, the global liquid-cooled data center market will exceed USD 20 billion by 2027, with a compound annual growth rate (CAGR) of 25%. 2 Liquid. Arista Networks this week announced that it has developed a 12.
